Floating staircases are proving an enduring finish for Perth's most prestigious homes.

Staircases can make an instant design statement in a home, commanding attention with their bold form and grand appearance.

From traditional timber straight flights and half-landing stairs to arched stairs and spiral, it's easy to feel overwhelmed by the options available on the market, let alone the finishes and fittings that will add a personalised stamp.

With a strong presence in WA as a leading supplier and manufacturer of stair nosing, stair treads and staircases, Byfinesse is just the one for the job.

The company's experience of more than 15 years in the timber flooring industry has taught it that the usual methods used in creating staircases, particularly from prefinished engineered boards, were inadequate.

These techniques used substitute materials, which meant colours rarely matched, and the final product was not uniform throughout.

With this in mind, Byfinesse developed innovative techniques to manufacture treads from any engineering/solid flooring material provided by any manufacturer.

In addition to creating faultless treads, LED lights can also be incorporated for a striking finish.

It is this passion and desire to create that has led the company to develop floating stairs that have acquired engineering certification.

Unique in their design, the floating stairs do not require any steel to be chased into the wall cavity, and the wire balustrade opens up the staircase for visual appeal.

Byfinesse creates all of this using state-of-the-art European machinery, 3D software, and the hard work of its experienced and knowledgeable team of staff.

No job is too big for Byfinesse, which thrives on tackling complex jobs, and finding solutions to problems that have previously existed in the industry.
